AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1. (currently amended) An insulated flexible electrical circuit suitable for implantation comprising:
 - a first polyparaxylylene layer deposited from a vapor phase;
 - an electrical conductor on said first polyparaxylylene layer;
- a second paraxylylene layer deposited from a vapor phase that defines at least one aperture exposing an said electrical conductor;

wherein said electrical conductor is located between said first polyparaxylylene layer and said second paraxylylene layer.

- 2. cancelled
- 3. (Original) The electrical circuit of claim 1, further comprising at least one polymer layer between said first polyparaxylylene layer and second polyparaxylylene layer.
- 4. (Original) The electrical circuit of claim 3, wherein said polymer is comprised of polyimide.
- 5. (Original) The electrical circuit of claim 1, further comprising at least one polymer layer on said first polyparaxylylene layer or said second polyparaxylylene layer that is not located between said layers.
- 6. (Original) The electrical circuit of claim 5, wherein said polymer is comprised of polyimide.

- 7. (Original) The electrical circuit of claim 1, further comprising a layer of a polymer between said first polyparaxylylene layer and said electrical conductor.
- 8. (Original) The electrical circuit of claim 7, wherein said polymer is comprised of polyimide.
- 9. (Original) The electrical circuit of claim 1 wherein said electrical conductor is suitable for stimulating a nerve.
- 10. (Original) The electrical circuit of claim 1, wherein said electrical conductor is suitable for sensing a signal from a nerve.
- 11. (Original) The electrical circuit of claim 1 wherein said second polyparaxylylene that defines at least one aperture further defines an electrode site suitable for detecting or transmitting signals to living tissue.
- 12. (Original) The electrical circuit of claim 1, wherein said electrical conductor is comprised of a biocompatible material.
- 13. (Original) The electrical circuit of claim 12, wherein said biocompatible material is selected from at least one metal from the group of titanium, platinum, gold or iridium.
- 14. (Original) The electrical circuit of claim 1, wherein said electrical conductor is at least partially coated with a biocompatible material.
- 15. (Original) The electrical circuit of claim 14, wherein said biocompatible material is comprised of titanium nitride.

16.-25. (Canceled)
